METROLUX ENGINEERING & PROJECTS

COMPANY PROFILE

Engineering. Installation. Maintenance. Project Support.
Metrolux (Pty) Ltd
Company Registration Number: 2020/861377/07
CSD Supplier Number: MAAA1635271
Website: https://www.metrolux.co.za/

1. COMPANY OVERVIEW

Metrolux Engineering & Projects is a South African engineering, installation and maintenance contractor providing practical support to the petroleum, industrial and commercial sectors.
The company focuses on delivering defined project scopes, technical installations, maintenance services and on-site support to clients, property operators and established engineering contractors.
Our approach is built around practical execution, clear communication, responsible work practices and an understanding of the demands of operational environments. We recognise that maintenance and installation work must be carried out with careful attention to site requirements, safety procedures, quality expectations and operational continuity.
Metrolux is structured to undertake suitable projects directly and to support larger contractors through subcontracting arrangements, specialist work packages and additional project capacity.
Our objective is straightforward: to build long-term working relationships by providing dependable technical and maintenance support.

2. OUR SERVICE DIVISIONS

2.1 FUEL INFRASTRUCTURE & PETROLEUM SERVICES

Metrolux provides installation and maintenance support for petroleum infrastructure and fuel dispensing environments.

Our areas of capability include:

- Underground and above-ground fuel storage tank installation and associated infrastructure.
- Fuel dispenser installation, replacement and maintenance.
- Submersible turbine pump (STP) installation, replacement and maintenance.
- Petroleum pipework installation and associated connections.
- UPP pipework and welding support, subject to the applicable technical requirements and personnel qualifications.
- Fuel station forecourt infrastructure and associated maintenance.
  Tank-system inspection, maintenance and project support.
- Fault-finding and technical support for fuel dispensing systems.
  Installation support, testing and commissioning activities.
- General petroleum-site maintenance and call-out support.

Work is undertaken in accordance with the project scope, site requirements, applicable legislation, manufacturer specifications and relevant technical standards. Activities requiring specialist approvals, statutory certification or specific authorisations are undertaken by appropriately qualified and authorised personnel.

2.2 ELECTRICAL SERVICES & INSTALLATIONS

Metrolux provides electrical installation and maintenance support for commercial, industrial and selected petroleum-related environments.

Our service areas include:

- Commercial and industrial electrical installation support.
- Electrical maintenance and fault-finding.
- Electrical infrastructure upgrades and modifications.
- Lighting installations and maintenance.
- Distribution board-related work and associated electrical infrastructure.
- Electrical support for petroleum facilities and equipment.

- Installation and maintenance support for associated electrical systems. General electrical project support.

The scope of each assignment is assessed against the applicable technical and statutory requirements. Electrical work requiring registration, authorisation, inspection or a Certificate of Compliance is performed and certified by appropriately qualified and authorised persons.

2.3 BUILDING & FACILITIES MAINTENANCE

Metrolux supports the maintenance and upkeep of commercial, industrial and operational facilities.

Our service areas include:

- General building maintenance and repairs.
- Commercial and industrial property maintenance.
- Painting and refurbishment.
- Minor construction and repair works.
- Preventative and corrective maintenance.
- Building repairs and maintenance support.
- Facilities improvement and upgrade projects.
- Site-based maintenance and project support.

We aim to provide practical solutions that help clients maintain safe, functional and presentable working environments.

3. INDUSTRIES AND CLIENT ENVIRONMENTS

Metrolux is focused on supporting clients and contractors operating in environments where reliable installation, maintenance and project support are essential.

Our target markets include:

- Petroleum retailers and fuel service stations.
- Fuel storage facilities and distribution depots.
- Truck stops and commercial fuel facilities.
- Industrial plants and manufacturing facilities.
- Commercial property owners and operators.

- Warehouses and logistics facilities.
- Offices and business parks.
- Shopping centres and retail properties.
- Engineering and construction contractors.
- Facilities management companies.

We are particularly interested in working with established organisations that require responsive subcontracting support, maintenance capacity or assistance with defined project scopes.

4. PROJECT DELIVERY APPROACH

Metrolux believes that successful project delivery starts with understanding the client's requirements and defining the work properly before execution.

Our general approach follows five stages:

1. Enquiry and Scope Assessment

We establish the client's requirements, site location, nature of the work, expected deliverables and any relevant technical or operational constraints.

2. Planning and Preparation

The proposed scope, resources, materials, work sequence and site requirements are reviewed before work begins. Where necessary, project-specific documentation is prepared for review and approval.

3. Site Execution

Work is carried out in accordance with the agreed scope, applicable site procedures, safety requirements and relevant technical specifications.

4. Inspection and Quality Checks

Completed work is checked against the agreed requirements. Any outstanding items or deviations are identified and addressed through the appropriate process.

5. Handover and Close-Out

Relevant completion records, inspection information and supporting documentation are provided in accordance with the project requirements.
The level of planning, documentation and reporting is tailored to the size, complexity and requirements of each assignment.

6. HEALTH, SAFETY, ENVIRONMENTAL & QUALITY COMMITMENT

Metrolux recognises that health, safety, environmental protection and workmanship are essential to responsible project delivery.

We aim to ensure that work is properly assessed, planned and executed in accordance with applicable legislation, client requirements and site-specific procedures.

Depending on the nature and requirements of an assignment, project documentation and controls may include:

- Risk assessments.
- Job Hazard Analyses (JHAs).
- Safe work procedures and method statements.
- Permit-to-work requirements.
- Toolbox talks and task briefings.
- Personal protective equipment (PPE) requirements.
- Site inspections and work-area checks.
- Quality inspections and completion checks.
- Incident and hazard reporting.
- Environmental controls and housekeeping.
- Project handover and close-out records.

6. SUBCONTRACTING & PROJECT SUPPORT

Metrolux welcomes opportunities to support established engineering contractors, petroleum service providers, facilities management companies and construction businesses.

We understand that project requirements can change and that contractors may need additional resources to meet deadlines, respond to maintenance requests or complete specific work packages.

We are interested in opportunities involving:

- Petroleum installation and maintenance support.
- Technical field support and site-based assignments.
- Planned and reactive maintenance.
- Defined installation and repair work packages.
- Commercial and industrial facilities maintenance.
- Project-based subcontracting.
- Overflow work and additional contractor capacity.

Metrolux is particularly interested in building working relationships with organisations that value clear scopes of work, practical coordination, responsible execution and professional communication.
Subcontracting arrangements are assessed according to project requirements, available capacity, commercial terms and applicable compliance requirements.

7. WHY WORK WITH METROLUX?

Practical industry understanding - Our approach is informed by hands-on technical and maintenance experience in operational environments.

Flexible project support - We are open to suitable once-off assignments, ongoing maintenance requirements and subcontracting opportunities.

Defined scopes of work - We aim to understand the required deliverables, site conditions and responsibilities before accepting an assignment.

Safety-conscious execution - We recognise the importance of site procedures, risk assessment, appropriate PPE and compliance with client safety requirements.

Direct communication
We value clear communication with clients, site representatives and project teams throughout an assignment.

Long-term working relationships
Our focus is on developing sustainable business relationships through reliable service and responsible project delivery.

8. GEOGRAPHICAL COVERAGE

Metrolux is based in Gauteng and focuses primarily on opportunities across:
Gauteng.
Limpopo.
Mpumalanga.
Projects in other parts of South Africa can be considered depending on the scope, location, resources and commercial requirements.
